CASE STUDY

Rizhao Hospital

Situation:

In January 2020 the coronavirus pandemic was becoming a serious problem worldwide, and Chinese hospitals were attempting to mitigate the spread of the disease and potentially reduce it to 0. To this end, the Front-line departments of Rizhao People's Hospital and Rizhao Hospital of Traditional Chinese got in touch with Healthy Air Technology, looking for a way to kill the virus completely.

Bacteria

Viruses

Pollutants

Dust

Sulphur dioxide

Nitrogen Dioxide

Solution:

In order to combat these long waiting times Lille University Hospital placed a HA800 unit in the surgeries to clean the air. The Healthy Air 800 purifier is equipped with our own DNO-Catalyst technology which completely breaks down harmful particles in the air. Combined with our CFD (Computation Fluid Dynamics) air flow technology it can bring healthy air to every corner of the room, without creating any dead spots.

Outcome:

Employing the Healthy Air purifiers brought the staff and patient death rate from Covid-19 down to “zero”, and the hospitals case/death rate became the lowest in the province of Shandong, receiving unanimous praise from the front-line medical staff.

“After installing these purifiers, the air quality is clean and odorless. The infection rate and death rate of staff and patients reached zero.”

Rizhao Hospitals

This technology is unique to our machines and is **the most effective and safe form of air purification, being certified to completely destroy pollutants.**
